Monthly

INDEX OF INDUSTRIAL PRODUCTION

Continued weakness in industrial production growth trends

The unadjusted index of industrial production for the European Community is estimated provisionally by EUROSTAT to have reached the level of 115.1 (1975=100) in September 1980, a drop of 5.4% over the figure recorded in the corresponding month of the previous year. This latest result follows the pattern traced by this growth measure since the beginning of the year of progressively diminishing rates of change (January - May) followed by deteriorating and negative trends thereafter. A similar, though not identical state of affairs is indicated by data which illustrate the growth rate of industrial production over the last 12 months compared to the preceeding 12 months. These indicate that EUR-9 growth has fallen continuously and sharply in 1980 to only 1.3% at the end of the third quarter. This suggests that the annual growth of the EUR-9 index of industrial production in 1980 will be well below the results achieved in the previous two years (4.9% growth in 1979; 2.3% growth in 1978).

Turning to short-term trends in the seasonally adjusted indices, the latest data show that the index of industrial production in the Community attained the level of 113.3 (1975=100) in September 1980, a fall of 1.0% over the revised August figure of 114.4. More significantly for the sixth consecutive month short-term growth (percentage changes in three month moving averages of the seasonally adjusted industrial production indices) has deteriorated sharply and has remained below a zero rate. Looking for the causes of these phenomena in terms of the growth trends in the three major product regroupments it is clear that the downturn has been most prolonged and severe in the Community's intermediate goods sector (see table 2). However the latest evidence also shows a very sharp fall in short-term growth in the investment goods sector and a lesser, but nonetheless, significant drop in growth in the consumer goods industries as well, suggesting a widening in the range of industries in which production cutbacks are taking place. EUR-9 branch data for the third quarter of 1980 are not yet available, but on the basis of earlier information it is clear that short-term growth trends have been weakening across nearly the whole spectrum of industry. A sharp downturn in growth rates occurred relatively early in the year in the Chemical Industry (NACE 25), Motor Vehicles (NACE 35) and Paper Industry (NACE 471/2).

At the member state level, short-term industrial production growth trends have been weak in all countries reporting data for September 1980 with particularly sharp downturns occurring in Germany and Italy (see table 2). In both these countries the fall in short-term growth appeared to be most marked in the intermediate goods sector.

N O T E S

1. Significance of growth rates A and B

— per working day:

- A last 12 months with respect to preceeding 12 months;
- B latest month with respect to the corresponding month of the previous year;

— seasonally adjusted:

- A last 3 months with respect to the preceeding 3 months;
- B latest month with respect to the previous month.

2. Methodological notes relating to the tables are published as supplements to the monthly bulletin.

3. For additional information on the Index of Industrial Production contact EUROSTAT, tel.: 4301-3264 or 4301-3450.

For additional information on all other indicators contact EUROSTAT, tel.: 4301-3521 or 4301-3450.

- 4. N.B.** : indicates that data are not available;
— indicates a non-existent series.
